# BEST LOCATION FOR INDIAN RESTAURANTS IN TORONTO

COURSERA-CAPSTONE PROJECT

Neethu Muraleedharan

# INTRODUCTION

- While opening a restaurant can be a very lucrative business, a lack of demand or over saturation causes many restaurants to close within the first year of opening.
- There are many different factors that can account for a restaurant's success such as location, competition and quality of the food.
- This is an important question that every business owner must face while choosing whether to open a restaurant or not? or which location is suitable for the business?

# BUSINESS PROBLEM

- The objective of this project is to analyze and select the best locations in Toronto to open a new Indian restaurant.
- Using data science methodology and machine learning techniques like clustering, this project aims to provide solutions to answer the business question: In the city of Toronto, if someone is looking to open a new Indian restaurant, where would you recommend that they open it?

# DATA ACQUISITION AND CLEANING

**Based on definition of our problem, factors that will influence our decision are:**

- Number of existing restaurants in the neighborhood (any type of restaurant)
- Number of and distance to Indian restaurants in the neighborhood.
- Distance of neighborhood from popular neighborhoods.

**In our project we will:**

- Acquire the names and boroughs of the neighborhoods by scrapping a Wikipedia page.
- Next, we use the foursquare API to find all types of restaurants within a 1000 meter radius for every neighborhood.

# THE LATITUDE AND THE LONGITUDE COORDINATES OF EACH NEIGHBORHOOD

# VISUALIZE THE RESULTING CLUSTERS

WE WILL PERFORM CLUSTERING ON THE DATA BY USING K-MEANS CLUSTERING

CLUSTER 0 - RED

CLUSTER 1 - PURPLE

CLUSTER 2 - BLUE

CLUSTER 3 - TURQUOISE

CLUSTER 4 - ORANGE

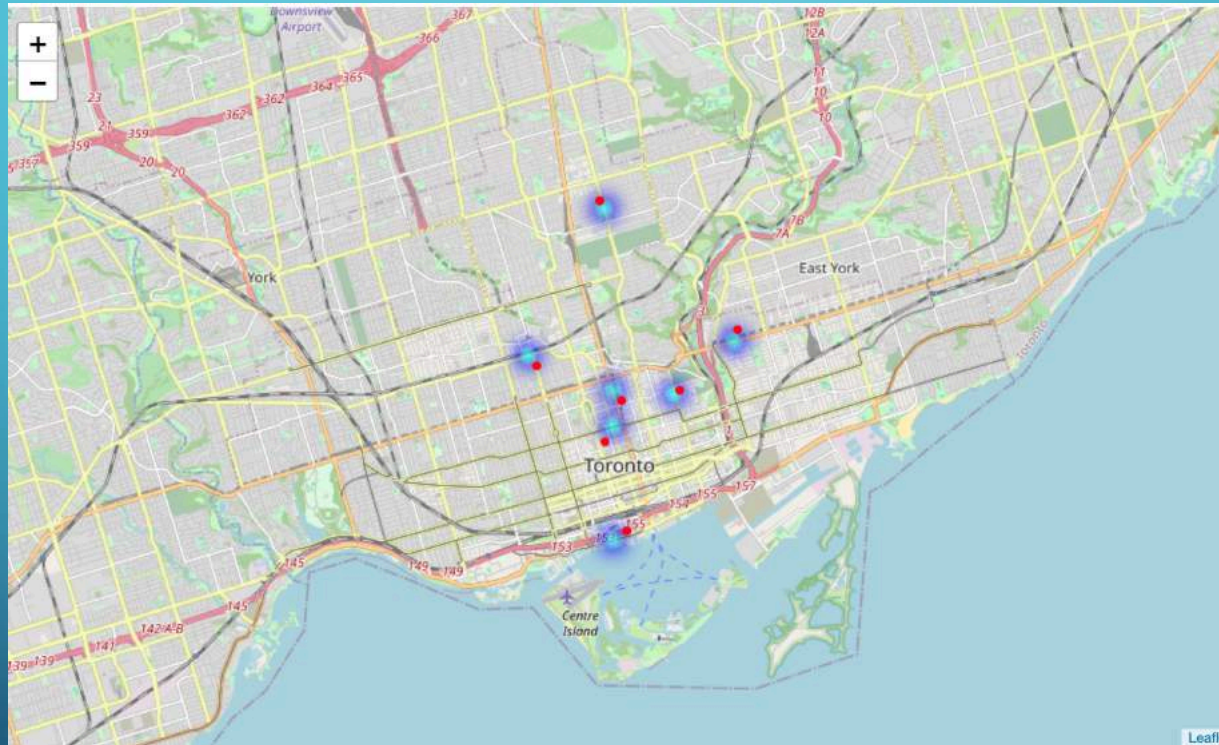

# ANALYSING CLUSTERS

ANALYSING THE BAR GRAPHS WE CAN CLEARLY SEE THAT CLUSTERS 0 AND 2 HAVE A HIGH DEMAND FOR INDIAN RESTAURANTS

# REMOVING ALL NEIGHBORHOODS WITH THE FOLLOWING CONDITIONS:

NUMBER OF INDIAN RESTAURANTS >30%

NUMBER OF ALL RESTAURANTS >60%

# CONCLUSION

- The neighborhoods recommendation obtained here are not completely accurate. This is due to the limitations in the dataset used in the project. Due to lack of cross referencing sources, we may have missed a few neighborhoods from our consideration.

The background is a blue gradient. In the corners, there are white line-art illustrations of circuit boards or neural networks, with lines and small circles representing nodes.

THANK YOU!!
